Key benefits

DUCTILE IRON

For more than 40 years, the **PAM** Municipal Casting ranges have been drawing benefit from the unmatched qualities of ductile iron : impact strength, resistance to specific mechanical stresses, high breaking strength and very high safety factors.

Thanks to the knowledge built up over many years in design and castings techniques, **PAM**'s latest generations of gratings and manhole covers have been designed with new performances.

The elasticity of ductile iron allows the linking and locking of AUTOLINEA and SQUADRA gratings and the SELECTA gully unit as well as the automatic locking of the new REXESS carriageway manhole cover, without the use of accessories.

In ductile iron, the graphite particles, which look like small spheres, provide high tensile strength eliminating any risk of cracking.

REXESS : the spring bar, integrated in the cover, allows automatic locking of the REXESS cover without accessories.

The spring-lock device guarantees:

- Stable seating in the frame
- Complete silence when trafficked
- Secure locking

ELASTOMERS

Manufacturer of sewer mains renowned for tight sealing, **PAM** has built up outstanding mastery in the field of elastomer and composite materials.

For some 20 years, **PAM** has chosen to apply this skill to municipal castings. Thus, **PAM** has developed two types of rings: elastomer and composite.

The quality of both rings used and their specific design ensure perfect stability of covers, safety for traffic and complete silence. And for many years, the elastomer rings are tested by the passing of several million vehicles.

The new composite rings, composed of a mixture polyethylene-polypropylene, show great performances in terms of fatigue strength and abrasion resistance.

SERVICE

Through Head Offices, its sales network in France and everywhere throughout the world, **PAM** and engineering teams are responsive to customer requirements and offer advice and training.

Quick deliveries are ensured by efficient logistics based on a stock of 200.000 items.

A close-knit network of stockists and distributors ensures that all ranges are available on all European markets and promotes the **PAM** image of quality and service.

What you need to know about the EN 124 standard, certification, and quality...

• **Euronorm EN 124 *** : is a standard approved by CEN in Brussels relating to municipal castings, which has been adopted in all European countries. Under this, compulsory certification must be carried out by a third-party body. Its logo is mandatory cast on both cover/grate and frame.

• **The NF Quality mark *** : for municipal castings was introduced by AFNOR (French standards authority). Products bearing the **NF** stamp meet the specifications of EN 124, as well as additional quality criteria. The credibility of this approval is backed by the renown and expertise of the inspection and verification testing houses acting on behalf of AFNOR.

The following information is supplied in compliance with Article 10 of the French Decree dated 30 March 1995 concerning the certification of industrial products:

- The **NF** mark for municipal castings certifies that compliance with Regulation NF-110 and the manufacturer's specifications via continuous inspection procedures carried out by AFNOR.
- The following table lists the main certified specifications. For all figures please refer to the relevant paragraph EN 124 or to the regulations.

Caractéristiques	§ de EN 124	B125	C250	D400	E600	F900

*Extract from AFNOR 1999 brochure.

The **NF** mark for municipal Castings guarantees a complete Quality Assurance Management covering all stages of production,

The **NF** mark for municipal Castings guarantees that strict product safety and performance have been carried out,

The **NF** mark for municipal Castings guarantees product tracability and origin,

The **NF** mark for municipal Castings guarantees customer service,

The **NF** mark for municipal Castings guarantees clear and precise information.

In compliance with EN 124, all products bearing the **NF** mark for municipal castings must also bear the following markings:

- 2** : Manufacturer identification
 - 4** : Resistance class
 - 5** : Reference standard
 - 6** : Mark of approval of the certification third-party body
- Additional markings:
- 1 : Ductile iron quality marking
 - 3 : Product identification

Selection criteria for manhole covers

PLACES OF INSTALLATION

Standard EN 124 divides products into minimum level groups and classes according to their intended place of installation :

- **Group 6 : (class F 900) :** Areas imposing particularly high wheel loads, such as aircraft pavements, etc..
- **Group 5 : (class E 600 mini) :** Areas imposing high wheel loads, such as docks, port areas, aircraft pavements, airports, factory yards, etc..
- **Group 4 : (class D 400 mini) :** Carriageways of roads - including pedestrian streets, hard shoulders and parking areas for all types of road vehicles.
- **Group 3 : (class C 250 mini) :** For gully tops installed in the area of kerbside channels of roads which, when measured from the kerb edge, extend to a maximum of 0.50 m into the carriageway and a maximum of 0.20 m into the footway.
- **Group 2 : (class B 125 mini) :** Footways, pedestrian areas and comparable areas, car parks and car parking decks.

Some manhole covers are capable of passing a test load which exceeds that specified for their class. Others are fitted with a reinforced frame in order to ensure stability in especially severe traffic conditions, while remaining in compliance with the installation conditions considered in the standard.

TRAFFIC STRESSES

In addition to the group and class concepts specified in EN 124, it is recommended that specific traffic and operating stresses should also be taken into account in order to select the most suitable product.

The following three parameters :

- number of vehicles,
 - speed,
 - type of vehicles - *cars or heavy vehicles* using the carriageway,
- are combined and contribute to the definition of the concept of the type of traffic.

TYPE OF TRAFFIC	NUMBER OF VEHICLES	SPEED	TYPE OF VEHICLES
Intense	High	Speed authorized on large urban roads	Regular use by heavy vehicles
Normal	Irregular	Stabilized urban speed	- Essentially light vehicles - Transit of heavy vehicles
Low	Low	Limited speed	Occasional truck traffic (deliveries, etc.)

PAM designs its manhole covers in accordance with traffic stresses in terms of : **stability, safety and silence**. The type of technical solutions implemented depends on the intended use of the casting.

TYPE OF TRAFFIC	SECURING OF COVER / GRATING IN FRAME	STABILITY / BEARING	INSERTION DEPTH (I)	FRAME DEPTH (F)
Intense	Weight of cover	Elastomer ring	$I \geq 80$ mm	$F = 100$ mm
Normal	- Locking - Metal seating	PE ring	Locking or $I \geq 50$ mm	$F = 100$ mm or $F = 75$ mm with anchoring means

NOTE : Standard EN 124 specifies that, where there is any doubt on the class to be used, the higher class must be selected.

Selection criteria for manhole covers

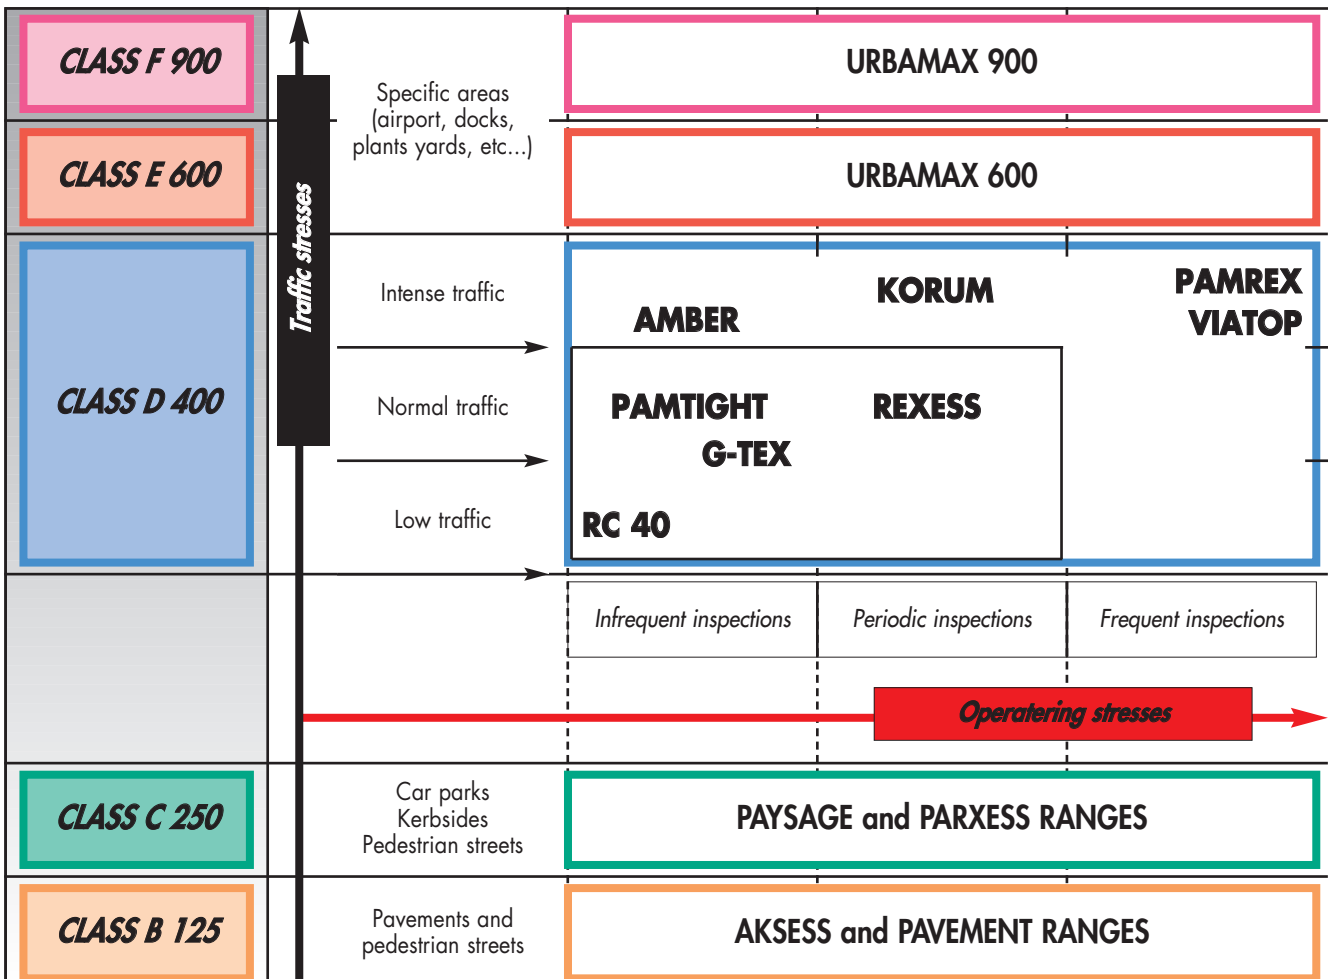

OPERATING STRESSES

Efficient management of sewer systems requires more frequent inspections and checks. The handling of municipal castings designed without due care can lead to damage in the lumbar region of the back and spine. All **PAM** manhole covers are designed to facilitate opening and closing operations with a minimum of force and to provide service teams with more ergonomic working conditions.

INSPECTIONS	OPENING ASSISTANCE SYSTEM	USER SAFETY	OPENING ERGONOMICS
Frequent	Hinge	90° locking Opening to 130°	1 single movement Standing position
Periodic	- Hinged mechanism - Pins	Device ensuring holding of tool and guidance of cover	Handling in two steps
Occasional	None	Cover positioning marker	Bending of back and pulling / lifting effort

RANGE

PAM offers a very wide range of carriageway manhole covers in accordance with all the requirements of standards and satisfying the specific criteria of each place of installation.

- Elastomer ring
- Push-in central pad
- Sealed handling box
- EN 124  

HIGH STRENGTH

URBAMAX E 600

URBAMAX F 900

Designed to withstand all types of traffic, URBAMAX can be installed on roads subjected to super heavy duty loading in addition to airports and dock areas, etc..

STRENGTH ++++

URBAMAX, class E 600 and F 900, has a high tensile strength.

STABILITY +++

The weight of the cover (63 kg in the non-ventilated version) and the addition of an elastomer ring and a double skirt dampens vibrations caused by traffic, ensuring total stability.

OPERATION ++

A handling box allows URBAMAX to be handled with traditional site tools : such as a pointed or flat end pick-axe, or crowbar. The cover is specially designed to ease closing.

	Type	Frame	Reference	Mass (kg)		Dimensions (mm)	
				Total	Cover	Clear opening	Frame depth

PAMREX

- Ductile iron
 - Class D400
 - Hinged
 - Elastomer ring
 - Sealed handling box
 - Optional anti-theft cover lock
 - Lifting rings integral with the frame
- EN 124  

ERGONOMICS ++++

HANDLING BOX

Raising the PAMREX cover to make a visual inspection while standing is effortless: place a crow-bar at 35° in the brand handling box insertion point and nothing could be easier. Conventional means of opening are also possible.

Heavy traffic

HIGH RESISTANCE TO TRAFFIC, ENHANCED ERGONOMIC DESIGN

Designed to cope with the heaviest traffic but quiet thanks to its elastomer seal, PAMREX is a reliable manhole that has withstood the test of time.

PAMREX's enhanced ergonomics now make it even easier to carry out works on systems while also improving operator safety.

In hundreds of towns and cities, even after millions of vehicles have driven over it, PAMREX continues to demonstrate its qualities of endurance and reliability.

STRENGTH ++++

PAMREX has a high safety factor with a breaking strength margin well above the requirements of EN 124.

Designed to withstand the stresses of intense traffic, in terms of large numbers of vehicles, regular use by very heavy vehicles and high speeds, PAMREX is the absolute reference in terms of performance and durability in France and Europe.

STABILITY ++++

PAMREX is silent: there is no metal-to-metal contact. Its frame is fitted with an elastomer ring which ensures:

- Damping of mechanical stresses caused by the repeated passage of vehicles,
- Self-centering and stability of the cover: the ring pinches the lower skirt and works against the suction phenomenon caused by vehicles' tyres.

OPERATION ++++

The PAMREX hinge ensures easy opening and operating safety:

- The PAMREX hinge does not come into contact with the frame when the cover is closed and it is, therefore, not subjected to traffic stresses. It is only placed under stress during opening and closing operations,
- In the event of the sewer system being accidentally pressurized, the PAMREX cover opens without coming out of its housing and recloses under its own weight.

PAMREX

The "extras that make life easier"

Option of fitting an anti-theft system

Safety / Operation identification

Identification of frame shape from markings, visible after embedment

Easy installation

A manhole cover designed to match perfectly into its environment.

THE PAMREX RANGE

PAMREX SAFETY

Opens to 130°, blocks at 90° when closing
 ➔ for sewage pipeworks

PAMREX OPERATION

Opens to 130°, without blocking at 90° when closing
 ➔ for pipeworks inspection from road surface

PAMREX SAFETY WITH CONCRETE INFILLED COVER

Opens to 130°, blocks at 90° when closing
 ➔ for sewage pipeworks
 ➔ cover appearance matches paved surrounding areas
 ➔ operation conditions identical to any other PAMREX versions

PAMREX WITH APPARENT FRAME

Frame designed for easy cobbles and paving installation, (height= 160 mm)
 ➔ for paved and pedestrian streets

Wide clear-opening manhole covers

PAMREX 700 Safety

Heavy traffic

- Ductile iron
- Class D400
- Hinged
- Clear opening: 700 mm
- Elastomer ring
- Sealed handling box
- Optional anti-theft cover lock
- Lifting rings integral with frame
- EN 124 

PAMREX 700 has the same functional features as PAMREX 600 (see pages 10 and 11). Access is made through a wide 700-mm opening specifically designed for systems requiring special safety conditions for operators.

Type	Type of frame	Reference	Mass (in kg)		Dimensions mm	
			Total	Cover	Clear opening	Frame depth
Non-ventilated	Round	CDPA70EF	108	71	700	100
Non-ventilated	Square	CDPA70MF	118	71	700	100
Ventilated	Round	CDPA70FF	108	71	700	100
Ventilated	Square	CDPA70PF	118	71	700	100

PAMREX 800 Safety

- Ductile iron
- Class D 400
- Clear opening : 800 mm
- Opens to 130°, blocks at 90° when closing
- Elastomer ring
- Sealed handling box
- Optional anti-theft cover lock
- Lifting rings integral with frame
- EN 124 

- Pamrex 800 provides easy opening, while continuing to offer the high performance levels of the successful Pamrex 600 mm and 700 mm clear opening designs.
- The 800 mm clear opening enables maintenance personnel to enter the manhole with their safety equipment, or to lower bulky equipment into the below ground network.

Type	Type of frame	Reference	Mass (in kg)		Dimensions mm	
			Total	Cover	Clear opening	Frame depth

PAMTIGHT

Normal traffic

- Ductile iron
Class D 400
- Two rings : - polyethylene seating ring
- elastomer sealing ring
- Fastened by 6 bolts and clamping claws
- Sealed handling box
- EN 124  

STRENGTH +++

By design, PAMTIGHT combines resistance to traffic stresses and tight sealing.

STABILITY +++

The cover is fastened by six clamping claws held by stainless steel bolts. Provision should also be made for anchoring the frame to the cover of the shaft in addition to ensuring the bedding is sealed.

OPERATION +

The clamping device can be rotated and the cover opened simply by loosening the bolts. Easy handling is facilitated by the relative low cover weight (52.5 kg) and the presence of a handling box (sealed).

HIGH-PERFORMANCE SEALING

PAMTIGHT is sealed to prevent the ingress or escape of water to a 1 bar positive or negative pressure rating.

Type	Frame	Reference	Mass (in kg)		Dimensions mm	
			Total	Cover	Clear opening	Frame depth
Non-ventilated	Round	CDPE60AA	102	52.5	610	100

Important

The kit Trafex (Reference : C49) was developed to improve the exploitation of the manhole cover Pamtight in conditions of extreme service : under strong and violent vibrations from traffic or as result of handling operation and maintenance carried out without the necessary precautions. It consists of anti-rotation clips, clamps, screws and washers as well as detailed notices. Its installation is the responsibility of the usual sanitation teams' services or road ones, according to the comments they have made on the site. In case of doubt as to its use, contact your Regional sales office of **PAM**. The manhole cover Pamtight is now offered for sale equipped with the kit Trafex.

INTER-AX2

Normal traffic

- Ductile iron
Class D 400
- 2 triangular half covers
- Widened-angles frame
- Square clear opening : 600 x 600 mm
- Metal seating
- EN 124  

Non-rock 3-point suspension on each cover.

Type	Frame	Reference	Mass (in kg)		Dimensions mm	
			Total	Cover	Clear opening	Frame depth
Non ventilated	Square	185 893	74.3	2 x 30	600 x 600	100

- Please consult our second catalogue to discover the range of square opening manhole covers

Heavy traffic

- Ductile iron
- Class D 400
- Hinged
- Composite ring
- Sealed handling box
- Spring bar
- Optional anti-theft spline / Optional anti-intrusion lock
- EN 124  

ERGONOMICS ++++

Safe and effortless handling thanks to the ball-joint hinge.
Effortless unlocking and opening of cover with pickaxe point

STRENGTH : ++++

New frame and ribs design prevent the deformation of the KORUM under intense traffic conditions

OPERATION : ++++

The hinge blocks at 90° when closing and ensures operating safety..

STABILITY : ++++

The spring locking mechanism under constant tension locks the KORUM cover in place in its frame in complete safety.

Ductile iron anti-theft spline

Prevent the cover from being extracted and stolen. It can be installed after the bedding of the frame.

Note: accessories are yellow painted for illustration purpose

Anti-intrusion lock :

The new locks D50, features a ductile cast iron bar, with high resistance to vandalism attempts.

Class D 400
Automatic locking by ductile iron spring bar
Hinged cover with 90° safety blocking
Optional anti-theft spline and locking system
Composite seating ring

EN124

Performance enhancement Composite vs PE ring:

- Resistance under traffic: x 2.6
- Resistance to breaking: + 70%
- Resistance to abrasion: x 3

- Stability and safety under traffic ensured by ductile iron spring bar.
- Automatic system secure and stable.

THE BEST OF EXPERIENCE

Representing a new generation of carriageways manhole covers, REXESS combines the innovation of its spring locking mechanism requiring no accessories with easy opening, stability, safety and silence.

STRENGTH ++

The completely new design of REXESS gives a double guarantee of performance and long service life. Optimized geometry of the cover: rigidity and strength to withstand the stress of usual carriageway's traffic. Fully mastered frame profiles: perfect seating on shafts, effective and durable bedding.

STABILITY ++

The spring locking mechanism provides REXESS with remarkable dynamic stability:
3 contact points: the hinge, the locking mechanism and the ring ensure vertical stability of the cover in the frame.
Permanent contact between the locking mechanism and the cover positioning lugs ensure horizontal stability.
The locking mechanism keeps the cover held against the sound-proofing ring: the cover is prevented from rocking and complete silence is ensured.

OPERATION ++

- Easy opening: using suggested tools, a lever effect in the handling box frees the spring locking mechanism and releases the manhole cover.
- Easy lifting once unlocked: the hinge reduces the force required to open the cover by half. For completely ergonomic handling, the central pad in the cover can be pushed in, and reclosed using the special plug (optional).
- Easy locking when closing: the cover can be locked without requiring any accessories, by simply pressing with the foot. If it is left unlocked, REXESS is locked automatically as soon as the first vehicle crossed it.

Normal traffic

PROTECTION OF THE OPERATORS

--------------	-----

G-TEX

Low traffic

- Ductile iron
Class D 400
Automatic locking by ductile iron spring bar
Pull and slide concept
Polyethylene ring
Optional anti-intrusion lock
EN124  

STRENGTH ++

The G-TEX safety factor compared to EN124 requirements intends it for moderate traffic areas.

STABILITY ++

G-TEX offers a safe and stable automatic locking system combined with a polyethylene ring.

OPERATION ++

Unlocking, removal and reinstallation of the cover are carried out using a simple pickaxe, risk-free of pinching.

G-TEX RANGE

Type	Type of frame	Reference	Mass (in kg)		Dimensions mm	
			Total	Cover	Clear opening	Frame depth

Locking kits, see page 17

RC 40

Low traffic

- Ductile iron + concrete
Class D 400
Supplied with concrete infill
Polyethylene ring
Sealed handling box
EN 124  

Lightweight concrete infilled manhole cover suitable for areas with low traffic density.

Type	Frame	Reference	Mass (in kg)		Dimensions mm	
			Total	Cover	Clear opening	Frame depth
Non-ventilated	Round	CDRC60CF	78	59.5	600	75
	Square	CDRC40KF	84,5			

NB: The frames are supplied with grouting holes in compliance with EN124 functional requirements.

Accessories for all PAMREX manholes and gratings ranges

LOCKING KITS

Locking clip, PENTA or SCS bolt

- 1/4 turn lock actuated by an asymmetrical five-sided bolt head (PENTA) or unique notched cylindrical head (SCS).
 - On site installation takes 5 minute:
 - ➔ Punch out the centre of the locking bolt area.
 - ➔ Install the kit in compliance with the instructions supplied.
 - Lock must be operated with the handling key supplied separately.
- It is recommended not to use the SCS key to open the cover.

1/4 turn lock system

PENTA Plus or SCS Plus bolt

GALVANISED STEEL MUDPAN FOR PAMREX

- Designed for ventilated covers and grating
- 4 suspension legs rest on elastomer ring
- High resistance to load of sand and mud
- Mudpans do not impair manhole covers or gratings normal functioning

*Complies with EN 124 functional requirements

Cover for traffic-bearing pedestrian zone

PARXESS

The new PARXESS hydraulic range is designed to provide an innovative, reliable and efficient response to new needs for access covers located in pavements and similar locations, where they may have to withstand the occasional load of passing vehicles. PARXESS offers the same benefits as AKSESS. (See p 22 and 23)

ERGONOMICS Convenient, easy opening and handling of cover

STABILITY New cover seatings system with improved dynamic cover location within the frame

STRENGTH Frames and covers are designed to provide rigidity, resistance to deflection and durability

EASY INSTALLATION Wide flanged frames give optimal seating and efficient, durable bedding on square concrete boxes

Identification of underground networks: four different caps are provided, each marked with a symbol representing an underground network, are available as an option.

- Plate of 4 identification caps: C42
- Locking kit without operating key: C41
- Operating key: C17

PAYSAGE

- Ductile iron Class C 250
- Polyethylene ring
- Sealed handling box
- EN 124

The PAYSAGE C 250 manhole cover can be installed in parking areas, at roadsides, in kerbside channels or on pedestrian footways.

Type	Frame	Reference	Mass (in kg)		Dimensions mm	
			Total	Cover	Clear opening	Frame depth
Non-ventilated	Round	CCPY60RF	53	35	600	75

HEIGHT ADJUSTABLE INSPECTION COVERS

Ductile iron
Class C 250
EN 124

These manhole covers are fitted on DN 400, DN 300 and DN 250 extensions installed on DN 300 and DN 250 inspection chambers. The hinged cover is tamper-proof once sealed. The cover, sliding inside synthetic ring, is height adjustable up to 95 mm. Tightness is obtained by means of a sealing ring (supplied) for either:

- cast iron DN 300/DN 250
- PVC DN 300/DN 250
- PVC DN 400

AKSESS : pavement hydraulic manhole cover

AKSESS, FOLLOW THE STAR OF MANHOLE COVERS

- Ductile iron
Hydraulic manhole cover
Class B 125
EN 124

STABLE, QUIET AND STRONG

Thanks to their perfect stability, AKSESS (water) manhole covers ensure quiet, trouble-free use for pedestrians and residents alike.

- 3-point non-rock system ensures the cover remains firmly seated in its frame
- Rigid and stable frames incorporating the LTS® system
- The underside of the wide seating pads located at each corner of the frame have a unique corrugated design that improves embedment and increases resistance to lateral shear by up to 5 times more than conventional designs

APPEARANCE

AKSESS is a range of attractive and functional manhole covers for pavement applications featuring:

- A new dynamic non-skid surface pattern,
- A universal lifting point with integral usage indicator
- A specific diagram for the locked versions

standard Aksess

EASY OPERATION

AKSESS, the fast and ergonomic solution for access to networks installed under pavements

- Opens effortlessly and remains stable in the vertical position in its frame;
- Slides effortlessly for practical handling;
- The lifting point for non-locked AKSESS covers is ergonomic and designed for use with standard tools

LOCKED AKSESS COVERS

SECURITY AND THEFT DETERRENCE

The locked version of Aksess covers meets specific requirements for the prevention of theft, vandalism and intrusion

- Protection of appliances and equipment installed under pavements
- Deterrent against cover theft
- Locked AKSESS covers have a special opening that can only be operated using the AKSESS key, which operates the special 1/4-turn lock

Guaranteed protection of your equipment.

AKSESS : pavement hydraulic manhole cover

OPTIONAL NETWORK IDENTIFICATION

Specific AKSESS caps:

- Protect the locking system against the ingress of debris
- Identify the type of network installed under the pavement

The AKSESS caps symbolise four of the most common services for which manholes are used:

- Wastewater
- Storm water
- Water meters
- Lighting/Traffic lights

Each locked Aksess manhole cover is supplied with four identification caps.

STRENGTH, STABILITY AND OPERATING FACTORS

=
Multiple-criteria comparison between products within the same class only (Class D 400, for example).

BREAKING STRENGTH MARGIN

=
Comparison between average breaking strength of the product and the EN 124 requirement.

○ = Average breaking strength up to 20% higher than EN 124 requirement.

○○ = Average breaking strength up to between 20% and 30% higher than EN 124 requirement.

○○○ = Average breaking strength more than 30% higher than EN 124 requirement.

NOTE

- Strength margins are specified with regard to the classes of utilization to which the respective products correspond.

- The field of application of products is limited to their utilization class by design.

How to install D 400 manhole covers

- Check the diameter of the manhole opening or groove that the frame is to be fitted on.
If necessary, insert a formwork around and/or inside the manhole on which the cover is to be fitted.
Make sure that the frame does not lay on the formwork when in its final position.

- Check the condition of the manhole opening or groove, removing any debris, loose particles or dirt (oil, grease, etc.). Remove any dust from the support.

- Do not use any (metal or wooden...) brackets, or any threaded spindles when adjusting the height of the frame.

 The cover must only be in contact with the sealing product!

- Lay a coat of sealing product around the top of the manhole. The minimum recommended thickness for the coat under the frame, once installed and levelled, is:
 - 4 cm in the case of quick setting "micro-concrete" type sealing products,
 - 8 cm in the case of a 350 CPA concrete sealing.

It is essential to follow very carefully the instructions of the product used.

- Lay the frame directly on the sealing product.

How to install D 400 manhole covers

- Adjust the frame to the same level as the wearing course. This adjustment should be carried out by exerting downward pressure on the frame to ensure that the sealing product spreads evenly under the surface. If the frame is situated below the surface level, then you must go back to point 4 (page 28) and repeat the operation.

With 350 CPA concrete

≥ 8 cm

With quick-setting concrete

≥ 4 cm

- Check that the frame openings have been completely filled.

- Fill with sealing product. At this stage you may opt to vibrate the concrete using vibrating needles, providing that you ensure that this will not alter the level of the frame.

- Use a float or trowel to level off the product, leaving 3 to 5 cm for the later laying of the asphalt course.

30 / 50 mm

PLEASE NOTE

Following installation, it is essential to check that the sealing product is not touching the lower section of the ring and prior to use, clean the manhole cover and the surrounding area thoroughly. Particular care must be taken with the operating parts, namely the hinges, the elastomer ring or others, the bases, the spaces for the openings, etc. In the case of PAMREX covers, leave a clearance space under the hinge box.

USEFUL TIP

In order to ensure that the sealing will last, especially under conditions of frost and thawing, we advise eliminating the water inlets on the sealing/roadway and sealing/frame interfaces by using either a liquid emulsion or a flexible joint.

New Ranges Duct cover: T-MAX

DUCT COVERS T-MAX i D400

Hinge built into the basic version:

- Flat lifting by two operators
- Articulated : Opening by an operator
- Very simple 90° blocking (releasing)

All Iron frame:

- Ductile iron frame welded by robots
- Total height 120 mm

Safety or opening assistance kits:

- To be mounted on the site after installation of the duct cover
- The structure requires no preparation
- Installed with a limited number of tools : hammer, wrench 19 mm

DUCT COVERS PAMETIC2

Specific areas like: airports, bridges, industrial sites, laboratories, ... require a high level of sealing on duct covers for pit and specific chambers

3 main fields of application:

- Sealed duct covers with 1 to 3 covers on a row
- Sealed access covers for technical channels
- Sealed multispan duct covers

Performances :

- The bearing surface between frames and covers is completely machined : the precision of the components and the

absence of gap provide sealing, stability and complete silence

- Water and odours tight sealing assisted with special sealing grease
- Easy and safety opening with handling keys
- For multispan duct covers possibility of opening the selected cover

KEY BENEFITS

PAMETIC

by GATIC

Easy installation •

Security •

Modular system •

Wherever **sealing, security and reliability** are required **PAMETIC** is the answer.

GAUGUIN

Combining aesthetic appeal and strength, **PAM** tree grates protect trees from vandalism and damage by vehicles.

The various patterns are designed to fit in with all styles while providing a large enough area for the absorption of water and to allow trees to develop.

The grates can be fitted on a galvanized steel angle fitting/frame.

The opening of Monet, Fantin-Latour and Daubigny grates can be increased to 975 mm by cutting the central ring in order to promote tree growth.

(*) Grates can be combined together.

T

he collection of run-off water has become a major concern :

- ▲ the development of impermeable surfaces considerably increases the volumes to be drained,
- ▲ while, at the same time, sewer system operating constraints are changing user needs, especially with regard to the filtering of debris and access for maintenance operations.

On the strength of its recognized experience in sewerage and its know-how as the leading European manufacturer of municipal castings, **PAM** offers a range of drain gratings that provide users with efficient, reliable and durable solutions. Always attentive to customer needs, **PAM** is constantly seeking to improve its product ranges to satisfy future requirements.

AUTOLINEA channel gratings	50/51
Channel gratings	52/53

TYPE OF COLLECTION

Run-off water can be collected either :

- by gully grates in a road carriageway or in a parking area, or by kerbside gully units.
- Linear collection, by channel gratings.

Multi-directional collection

Channelled drainage

LOCATION OF GULLY POT

The type of grating to be used is generally determined by the location of gully pots and the design of the drainage network.

- When the gully pot is situated directly under the carriageway, a square flat grating is used.
- When the gully pot is positioned to provide kerb and carriageway drainage, either a gully grate or a SELECTA inlet should be used.
- When gully pots are sited under the foot-path, units which incorporate a cover plate and grate are used.

Gully pot positioned under carriageway

Kerb or carriageway combination

Gully pot positioned under pavement

TRAFFIC RESISTANCE

Like manhole covers, gully grates must be selected according to their place of installation as this determines their strength class in accordance with the definition in EN 124 (see page 6).

DECISION-MAKING AID

In order to help customers make their choice among the various gully units, frame gratings and channel gratings in the gully grates range, **PAM** has prepared a dimensioning and decision-making aid software package.

It can be used to determine the following points on the basis of the characteristics of the site studied :

- the type of grates,
- the number of grates to be used,
- the spacing between two successive castings,
- the quantity of rainwater drained by the sewer system.

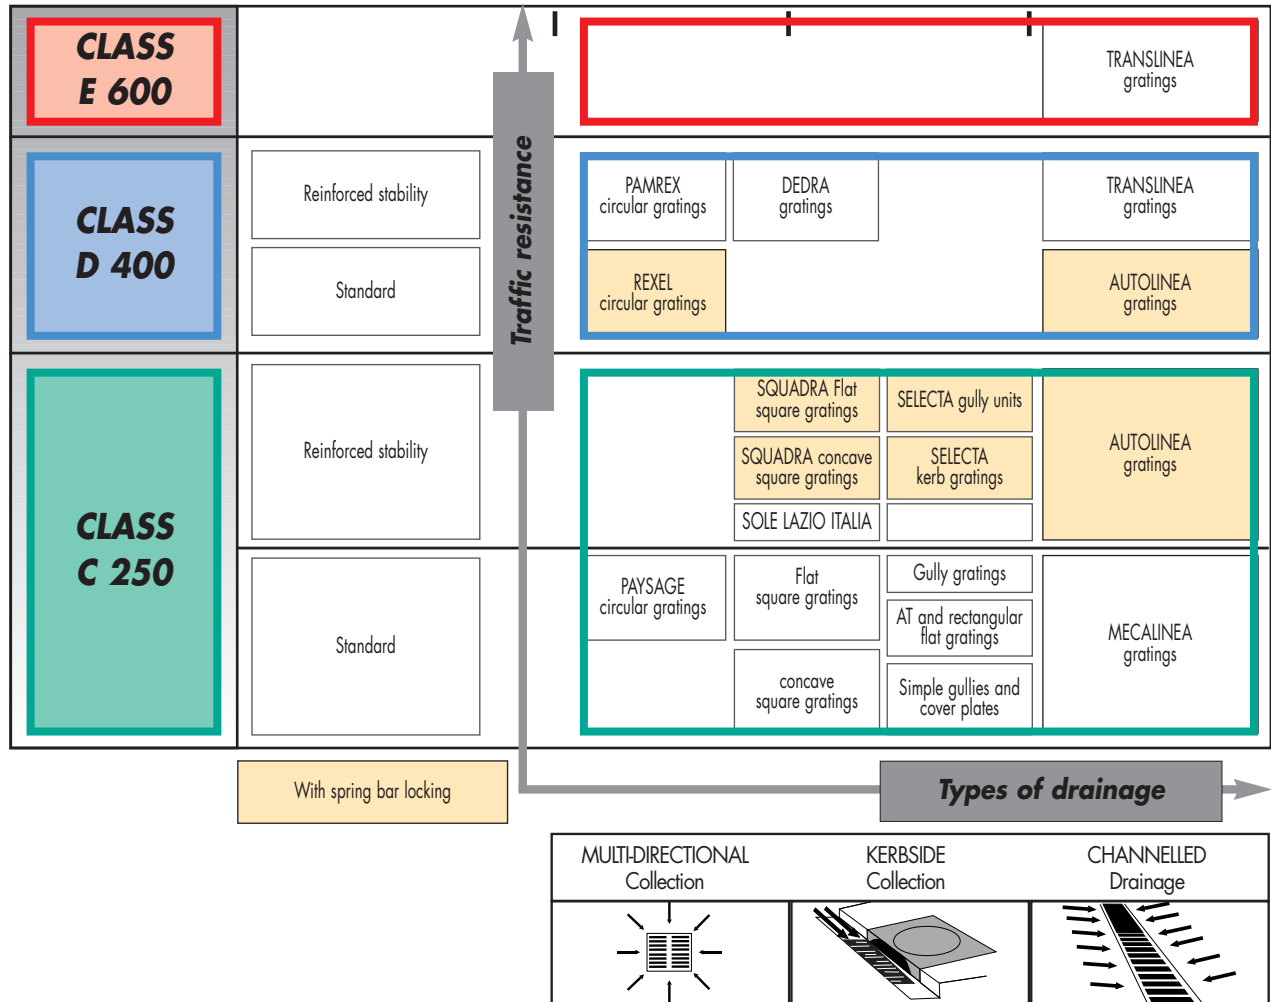

Please consult our sales engineering teams.

Selection criteria for gully grates

RANGE

Confronted to the wide diversity of situations encountered, users are increasingly choosing specific drain inlet devices in order to optimize the collection of rainwater and run-off water.

In response to this demand, **PAM** provides a wide range of products constituting suitable technical solutions for each specific configuration.

GRATING GATIC FOR AIRPORTS F900

- Ductile Iron
- Machined and greased seating faces
- 2 levelling bolts on each side bar (level setting)

* for channel application: use gratings with side bars and 2 end plates

PAMREX GRATING

- Ductile iron
 - Class D 400
 - hinged
 - Elastomer ring
 - 1 handling box
 - Lifting rings integral with the frame
 - Optional anti-theft grate locking
 - Interchangeable with PAMREX cover
- EN 124  

Completely interchangeable with PAMREX covers, the grating withstands the most intense traffic. Silent thanks to its elastomer ring, the PAMREX grating is innovative owing to its hinge mechanism which facilitates opening and allows locking safety. It can be used on an ad hoc basis during sewer inspections or on a permanent basis to ventilate systems and reduce the risks of hydrogen sulphide formation.

PAMREX safety : cover opening to 130°, 90° locking on closing.

Circular gratings

REXEL GRATING

- Ductile iron
- Class D 400
- Automatic locking by ductile iron spring bar (patented system)
- Hinge
- Unlocking box
- Optional anti-theft grate locking
- Rexel grate is interchangeable with cover
- EN 124  

The REXEL grating is specially designed to withstand medium-density traffic. Its design ensures performance, long-life and stability.

DEDRA GRATINGS D400

■ A new range of gratings designed for all types of traffic stresses, carriageways, parking, kerbside..., thanks to its high performances stability features.

Details of the DEDRA product:

- Flat square gratings with 4 side-flange frames (street setting) and 3 side-flange frames (kerb setting)
- Concave gratings with 4 side-flange frames

Two types of frames available:

- With standard opening
- With round opening
 - forming a mud-pan (ref: E4 not supplied) bearing plate and centring studs for pipes and 400 ND plastic extensions

SQUADRA FLAT AND CONCAVE C250

- Ductile iron
Class C 250
Secured by patented ductile iron
spring-lock mechanism
EN 124  

Flat SQUADRA

Concave SQUADRA

Successfully developed with AUTOLINEA gratings and the REXEL manhole cover, the ductile iron spring locking mechanism equips SQUADRA gratings. Locking of the gratings and a newly designed frame provide maximum stability and more precise installation on the gully pot.

STABILITY ++++

SQUADRA gratings incorporate a feature considered by users to be increasingly important: **stability**.

The "T"-frame ensures optimum seating of the grating, and better assembly fit on the concrete gully pot.

INSTALLATION AND OPERATION ++++

- flat soled frame for practical and effective embedment
- compatible with prefabricated concrete manholes
- easy to open by system service teams using a crowbar or pickaxe as lever
- easy to close automatically : place the grating into its frame, exert pressure on the grating with foot or tool to lock it safely»

SAFETY ++++

- Flat SQUADRA gratings can be rotated 90°: the click-in system operates whatever the position of the grating in its frame. This feature means the bars can be placed perpendicular to the flow of traffic, irrespective of the way in which the frame has been sealed into place.
- Concave SQUADRA gratings also provide maximum safety with bi-directional bars ensuring safety for cyclists and pedestrians.

ABSORPTION ++++

- The bars have been specially developed to optimize absorption. In particular, the presence of a range of directional facets facilitates the washing away of leaves, and also breaks up the water sheet.
- Flat SQUADRA: rotate the grating in the frame to optimize absorption.
- Concave SQUADRA: dual bar orientation for maximum performance.

Square gratings for kerbsides and car parks

GRATINGS WITH HIGH FRAME - C 250

- Ductile iron
- Class C 250
- Surrounding bedding flange
- EN 124  

The ITALIA, LAZIO and MILANO gratings have a raised frame and a surrounding flange which reinforce the strength of their bedding and provide greater safety under traffic load. The absence of ribs on the outer face of the frame facilitates the installation of the gratings on paved roads or areas.

Rectangular gratings for kerbsides

GRATING AT - FLAT GRATING WITH FRAME- C 250

- Ductile iron
Class C 250
EN 124  

Flat rectangular gratings with frames are usually installed at the kerbside, alone or in addition to a cover plate or a gully.

Grating AT

Flat grating

SOLE GRATING

Ductile iron
Class C 250, 400 kN test load
Hinging on lengthwise
Handling box
Anti-theft grating
Reinforced frame
EN 124  

Easy to open, the SOLE grating is designed to allow quick access to sewer systems. Its raised frame is fitted with a three sides bedding flange, allowing solid and durable bedding at the kerbside, opposite a gully for example. The grating is anti-theft once it has been bedded.

Base size mm	Reference	Mass kg		Dimensions mm			Waterway area dm ²

600 x 350	EC63EF	37.5	22	725 x 420	600 x 350	77	9

SELECTA KERB GRATINGS

- Ductile iron
Class C 250
Articulated grating
Locking feature due to spring-lock device
EN 124  

SELECTA kerb gratings are fully compatible with standard kerb dimensions as defined in French standard NF P 98-302. They are easy to install and are impeccably finished.

- Reinforced frame for complete stability and effective seating on concrete structures.

The SELECTA grating with T-profile raised selector bars is compatible with:

- T-profile cover plate, ref.: ECRV80TF,
- T-profile gully, ref.: ECAV80TF

SELECTA grating installed alone.

SELECTA gully units

SELECTA - C 250

- Ductile iron
- Class C 250
- Locking of the flaps by the elasticity of ductile iron (patented system)
- Adjustable to pavement level
- EN 124  

The result of intense cooperation between **PAM** and sewer system managers, the **SELECTA** gully unit is the professionals' solution to the problem of draining rainwater.

Selecta is available in two versions:

- (a) SELECTA MAXI height adjustable
- (b) SELECTA 500

- A or T-profile
- with raised selector bar grating
- with flat grating

(a) *SELECTA Maxi, A-profile with raised selector bar grating.*

(b) *SELECTA 500, T-profile with flat grating*

■ SCREENING OF DEBRIS ++++

The presence of a raised bar prevents access into the gully for debris of too large a size and keeps certain solid objects carried by run-off water out of the sewer system.

■ SAFETY FOR PEDESTRIANS ++++

On the pavement side, the elimination of clearance on the hinge system and of any roughness on the surface of the cover ensure safety for pedestrians (high heels, walking sticks, crutches, etc.).

■ AUTOMATIC LOCKING ++++

ductile iron spring bar integral with grate and cover.

■ SAFETY FOR CYCLISTS ++++

On the carriageway, the bars are perpendicular to the direction of the traffic in order to ensure safety for cyclists.

■ DRAINAGE ++++

In the lower section of the gutter, the bars are arranged longitudinally in order to maximize water drainage. Simulations carried out on a test bench show increases of between 10 % and 15 % in absorption, in certain circumstances, compared with a traditional design consisting of a rectangular grating and a gully.

■ ADJUSTABILITY ++++

Three bolts allow the height adjustment (up to 50 mm) of the cover frame with respect to the kerb.

■ ANTI-OBSTRUCTION ++++

The surfaces of the bars are equipped with facets that are oriented in such a way as to prevent leaves or litter from blocking the drain.

SELECTA MAXI level adjustment and maximum capacity

- SELECTA Maxi gullies are designed for mixed roadway/pavement installation.
- Cover and kerb leveled using 3 adjustment bolts integrated into the frame.
- Raised selector grating or flat grating.

SELECTA Maxi, A-profile with raised selector bar grating.

SELECTA Maxi, T-profile with raised selector grating

SELECTA Maxi, T-profile with flat grating

SELECTA 500 compact and high-capacity

- SELECTA 500 drain gullies are fitted on standardized gully pots (500 mm), and are designed for mixed roadway/pavement installation.
- Broad soled frame for effective seating on concrete structures. Dimensions compatible with gratings, gullies, bases, and concrete kerbing.
- Raised selector bar grating or flat grating

Gully units

GULLY COVER PLATES AND INLETS - C 250

- Ductile iron
Classe C 250 (frame)
B 125 (cover)
EN 124  

The cover plates are designed to be fitted on large-sized gully pots under pavements (kerb or carriageway combination).

Inlets are simple versions of cover plates without cover.

COVER PLATES

Kerb profile	Reference	Mass kg		Dimensions mm			Waterway area dm ²
		Total	Cover	Overall	Clear opening	Depth

GULLY GRATING - C 250

- Ductile iron
Class C 250
EN 124  

These inlet gratings are fitted on small-gully pots (500 mm) of a mixed road/pavement type installation. The grating's profile is specially designed to prevent obstruction by leaves or other debris whilst allowing the maximum drainage.

INLETS GRATING

COMMUNAL GRATING C 250

- Ductile iron
Class C 250
Sloped reinforced frame
Available with or without centring lug
Seating flange on 3 sides
EN 124  

The COMMUNAL grating is equipped with a sloped frame which automatically ensures a crossways slope. The bedding flange on three sides facilitates fitting along the kerb and ensures optimum stability.

NB : In case of intense traffic, we recommend the installation of the range DEDRA 400. See page 39.

Longitudinal channel gratings

AUTOLINEA D 400

Functional diagrams of AUTOLINEA C 250 locking/unlocking

SIMPLE !

Easy to install.
Gratings are simply snapped into place through a ductile spring lock.
With AUTOLINEA, no accessories are needed.

SAFE !

AUTOLINEA provides safety in service :

- no danger of accidental displacement,
- limit vandalism,
- anti-dilatation effects.

QUICK !

Removal by professionals is instantaneous, using a crowbar as a lever.

AUTOLINEA - D 400 and C 250

- Ductile iron
Classes D 400, C 250
Automatic ductile iron spring bar,
patented system
EN 124  

A brand new generation of channel gratings, AUTOLINEA gratings are linked together by a ductile iron spring bar. They are usually installed on cast iron T section frames or steel angle fittings which protect the concrete channel and maintain the support level.

■ AUTOLINEA D 400

► **FIELD OF APPLICATION :**
Channels located at the side of motorways and roads carrying intense traffic, excluding singular points which may be subject to crosswise traffic, such as : interchanges, lay-bys, and telephone call stations, breaks in central reservations and crossroads, in which case the TRANSLINEA grating designed for crossing carriageway are required. (See page 52).

Reference	Base size	Mass kg	Dimensions mm			Waterway area dm ²
			Clear opening*	Depth	Thickness

EDAL50PF	750 x 500	43	450			20

Cast iron frame pieces : see page 52.

■ AUTOLINEA C 250

► **FIELD OF APPLICATION :**
Street channels along pavements, excluding singular points which may be subject to crosswise traffic in the field of class C 250 and for which the linked MECALINEA grating is required. (See page 53).

Reference	Base size	Mass kg	Dimensions mm			Waterway area dm ²
			Clear opening*	Depth	Thickness

Gratings for crosswise channels

TRANSLINEA - E 600 AND D 400

- Ductile iron
- Classes E 600, D 400
- Mechanical chaining
- Securing to channel
- EN 124  

TRANSLINEA gratings are used, above all, for crossing carriageways.

They must be installed with the chaining devices joining the gratings together and the end pieces securing the gratings to the channel. This complete, modular system ensures optimum safety under traffic load. Please see the fitting instructions.

TRANSLINEA E 600

- ▶ **Field of application :** All areas involving high axle loads such as: aircraft and port areas, plants, in particular.

Class	Reference	Base size	Mass kg	Dimensions mm			Waterway area dm ²
				Clear opening*	Depth	Area	
E 600	EETL40PF	750 x 400	46	350	85	35	12.9

TRANSLINEA D 400

- ▶ **Field of application :** all carriageway crossing points, roads carrying intense traffic and other singular points such as : interchanges, lay-bys and telephone call stations, breaks in central reservation and crossroads.

D 400	EDTL40PF	750 x 400	47	350	85	35	12.9

CAST IRON T SECTION FRAME FOR AUTOLINEA D 400 AND TRANSLINEA E 600 / D 400

Type	Reference	Mass kg	Dimensions mm	
			Length	Depth
Length 750 mm	E7	10	750	100

Note : To ensure that channel gratings in classes D 400 and E 600 provide optimum strength and stability when subjected to traffic stresses,  approval is granted to complete units comprising the grating, its cast iron T section frame and, where applicable cast iron end pieces.

If other types of T section frame or angle fitting are used, i.e. steel in particular, their dimensioning and their anchoring in the masonry must be ensured by the specifier, taking into account the stresses due to traffic.

MECALINEA

- Ductile iron
- Class C 250
- Chaining of gratings
- EN 124  

MECALINEA gratings are traditional gratings with mechanical chaining that are installed on cast iron T section frame or steel angle fittings.

► Field of application : as per class C 250 : street channels along the side of pavements and, in particular, singular points which may be subject to crosswise traffic and where chaining is necessary.

Slot drainage channel system

LINEA SLOT BY GATIC

LINEA SLOT by GATIC

A complete galvanized steel system.
Great absorption capacity validated by a dedicated dimensioning software.
Fast and safe installation: 3 m length elements.
Do not hesitate to ask the specific catalog or the preparation of a technical layout for your project.

Surface Boxes

PAM proposes four separate product ranges which cater to different requirements.
Specific catalogue available on request

PAVA EXTENDABLE SURFACE BOXES

PAVA surface boxes feature **built-in extension capabilities**
 The lower base of the body features screw-nut type threads and is designed to allow the unit to be raised during road resurfacing operations by simply "unscrewing" the assembly.

The design includes

- A self-locking system which prevents the lid from being removed by street cleaning equipment or by acts of vandalism
- A wide base reduces the risk of subsidence under traffic loads: stability and silence of the lid on its seat
- Side bonding ribs at the base of the body to prevent rotation during extension operations

Round

Square

Rectangular

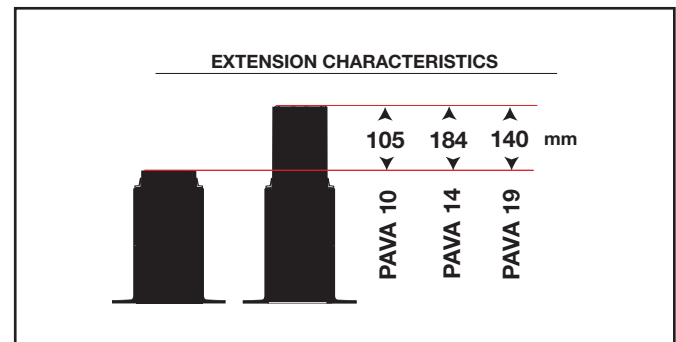

Hexagonal

Type	H1	H2	∅ DI	A	C	∅ DI'	∅ B	D	Mass	Extendibility	Reference
PAVA 10	145	145	102	240	220	137	114	147	8.4	105	F1PVAC
PAVA 14	250	250	102	240	220	137	114	147	13.1	184	F2PVAC
PAVA 19	192	222	120	300	282	148	162	216	19	140	F3PVAC

* Other lid versions and options (shape and chain) are available: please contact us for details

Designed to simplify the extension operation, the lids of the PAVA 10 and 14 can be turned over and used as a tool to limit the operating force. Equipped with two studs forming an operating nut, the inside face of the lid can be used to adjust the extension height using a plain 30 mm wrench or with a Tee wrench used for valve operation. The PAVA 19 requires the use of a specific operating lid. Reference: F3PVRCT

TOTALE SURFACE BOXES RANGE

Two versions are available: "Sidewalks and streets". The base of the "street" version offers a wide bearing surface for enhanced stability under traffic loads.

Surface boxes with "water" badging have a hook-opener type lid with no through hole, chainless*
